imc C-SERIES
complete • versatile • portable

Handy all-in-one data acquisition system for electromechanical testing
imc C-SERIES at a glance

- Cost effective, ready-to-go system
- Portable measurement and control system
- All data synchronous: analog, digital, CAN or CAN FD
- Up to 400 kS/s per system and up to 100 kS/s per channel
- Universal signal conditioner
- Sophisticated and intuitive triggering system
- Versatile storage options including onboard removable flash media
- Networkable with other imc systems for synchronous acquisition of thousands of channels
- Integrated real-time analysis and data reduction
- Stand-alone, remote or interactive operation (via Ethernet TCP/IP connection)
Sized to be easily portable, yet surprisingly versatile, the imc C-SERIES is also a powerhouse of capability: from the analog inputs with integrated signal conditioning, to the digital I/O, counter inputs, analog outputs, CAN FD I/O, and included real-time imc Online FAMOS data processing and control system - everything you need to set up a quick test is, literally, in the palm of your hand!

Regardless of where your testing takes you - from the field to the lab - the all-in-one concept of the imc C-SERIES systems means that you will always have everything you need at your fingertips. And since onboard flash storage gives you the freedom to run interactively or stand-alone, you can easily setup an overnight test and won’t have to worry about leaving your laptop behind. Furthermore, the UPS battery backup ensures safe operations and data integrity, even if the power is less than reliable at your testing site.

In-vehicle testing is also an area where the feature packed imc C-SERIES can really offer a boost to your testing productivity. Incorporating a synchronous, dual-node CAN I/O interface in the standard design, the CAN and CAN FD capabilities may be extended to include direct ECU communication, utilizing a variety of standardized ECU protocols, such as KWP 2000, CCP, OBD-2, etc.

When operated interactively, the imc C-SERIES systems utilize the imc STUDIO operating and configuration software. This not only gives you live measurement displays, but optionally provides full test stand automation capabilities, while ensuring compatibility with all other imc data acquisition systems.

While it may be small, don’t let the size mislead you: the imc C-SERIES is packed with capability. Think of it as your multi-tool for the test and measurement world.
Productive testing with imc C-SERIES

Portable design goes wherever you go
- All-in-one design ensures the essential I/O is always ready for your testing
- Integrated signal conditioning means the convenience of a one-box solution
- Supports all electromechanical sensors in mixed-signal measurements
- Software based configurations are easily stored, loaded, and modified to meet test demands

Maximize your test efficiency
- Real-time data processing while the test is running; so results are immediately available
- Intuitive trigger system stores only the important data for easier post-processing
- Easily switch between interactive, remote, or stand-alone operation as tests require
- Standardized hardware addresses all your testing needs

Saving your money
- Universal amplifiers incorporate signal conditioning for most sensors types, from static to highly dynamic measurements
- Synchronous recording of analog, digital and CAN-based signals in one system
- Future-proof: also supports the new fast CAN FD standard
- imc’s unique breakout connectors provide quick connections for any existing sensor
- Supports sensor-based automatic sensor recognition, and add-on TEDS from imc
- Expandable via distributed synchronous CAN I/O modules

Gaining your independence
- Measurement and real-time control in one unit
- Portable design goes from field to test bench as your testing requires
- Stand-alone operation with the flip of a software switch when the PC cannot be used
- Includes power-up self-start and internal storage

Securing your investment
- Robust and reliable wide range DC power supply
- Guaranteed data integrity even upon power outage: integrated Super-Cap ensures safe termination of onboard storage
- Redundant data storage options: to local flash media in addition to parallel storage on PC or network drive (NAS)
Troubleshooting even in the field
You never know quite what you’re going to face when going into the field to diagnose a customer’s concern. Troubleshooting is tough enough without also having to fight the limitations of your tools. That is why the imc C-SERIES systems are so ideally suited to tackling the unknown. “With a pocketful of sensors, I know my imc C-SERIES can connect quickly and easily to whatever I need to measure.” The handy imc screw terminal connectors ensure that any connector is compatible. This is especially important when you are travelling away from home base for the troubleshooting work.

Goes places other systems cannot
High voltage vehicle testing can present its own unique challenges. “When testing the prototype of an electric train, we unexpectedly had to investigate vibrations on the 15 kV pantograph.” But equipment isolated to this level isn’t necessary. “By strapping the small imc C-SERIES and car battery directly to the pantograph, it could safely ride on this high potential and monitor a couple of strain gauges and accelerometers.” After configuring the system via its integrated WLAN network link from a safe distance, it could perform the test run measurement autonomously, saving data to onboard flash memory.

Integrated test bench automation
The small size of the imc C-SERIES hides the fact that this system is fully equipped for even the big jobs of test stand automation, thanks to its included real-time data processing and control capabilities. Structural and fatigue testing are common in a variety of fields, including the development of advanced downhill skis. “In this dynamic stress test, we could easily create a closed-loop simulation of a variety of extreme conditions, simultaneously collecting data from both the test actuators, load cells and a variety of strain gauges located across the ski’s surface.”
Handy all-in-one test system

**imc C-SERIES CS front side: signal**

- Analog output
- Frequency speed/angle
- Digital input/output

**imc C-SERIES CS back side: system**

- CAN-FD I/O for expansion and integration
- Directly synchronize multiple imc systems of any type, for virtually unlimited expansion
- External handheld display connection
- Onboard removable display connection (CS only)
- Ethernet connectivity
- Smart power supply for 9 – 32 VDC, with integrated short-term UPS
- User configurable status LEDs
- Direct input for GPS position / time sync
- WLAN connectivity

**Additional features**

- CAN
- EtherNET – TCP/IP
- GPS
- Time/Position
- RJ45 - CAT5 - WLAN
- WLAN antenna

**Connecting options**

- External CAN I/O, e.g. imc CANSAS modules
- imc STUDIO
- Data Acquisition Software
Design Concept

imc C-SERIES architecture

The core of the imc C-SERIES systems is designed around the singular concept of putting everything you need into one place:

- TCP/IP Ethernet interface for system configuration and interactive data collection
- Onboard flash storage (CF card)
- Real-time signal processing and test control with imc Online FAMOS
- GPS (for time and/or position information) and external display connectivity
- Stand-alone startup and power-failure control logic

Platform capability

imc C-SERIES is capable of a 400 kSample/s data collection rate. This acquisition rate is shared by the active channels in measurement, and is configurable on a per channel basis for up to two independent sample rates per system.

In addition, all imc C-SERIES systems are equipped with both a dual-node CAN-FD interface and imc’s comprehensive multi-I/O, providing digital inputs, encoder/counter inputs, and both analog and digital outputs.

Models designed for effectiveness

With up to 100 kSample/s per channel, and integrated signal conditioning and sensor power supplies, the imc C-SERIES systems are up to the toughest data acquisition challenges. In addition to the universal CS-7008 and CL-7016 models, compatible with virtually every physical sensor and signal type, there are more imc C-SERIES derivative models to suit specific sensor types and applications. All systems not only integrate sensor signal conditioning, but also filtering and synchronous digitizing for up to 32 channels.

Real-time functionality at your fingertips

One of the core concepts of all imc data acquisition systems is integrated synchronous control: an extensive array of real-time functionalities, including both signal processing and control (feedback) loop management.

The imc C-SERIES, like the members of the imc CRONOS family, is well-suited to interact with the test environment, including discrete digital input and outputs (compatible with both TTL/5V and 24V logic), as well as analog outputs, and CAN-FD I/O.

Control signals and simple logic are often handled without the need for any programming, directly through imc’s powerful trigger engine. The trigger logic capabilities are a standard part of all imc data acquisition systems, including the imc C-SERIES, and are easily accessed through the imc STUDIO configuration and operation software.

For advanced real-time analysis and control, imc Online FAMOS is included. This standard feature of the imc C-SERIES systems provides the capability of handling tasks ranging from basic statistical operations, such as min./max., average, and RMS, to more demanding calculations, such as FFT spectral analysis, signal classification (fatigue analysis), and order tracking. These virtual channels provide computed information on the fly, in real-time.

In addition, imc Online FAMOS extends the capability of your system to easily create PLC-like control functionality with minimal specialized knowledge and without requiring any skills of programming languages. This includes everything from basic digital I/O and open-loop control, to closed-loop PID control with analog, digital or CAN I/O satisfying hard real-time requirements.

imc C-SERIES with plugs
One software for the entire testing process

**imc STUDIO – the modular software for measurement, control and automation**

Whether you want to use your imc C-SERIES in a „black box“ configuration for easy data acquisition, or you want to set up Live-Monitoring on hundreds of channels during prototype testing, or you want to create a complete test stand automation routine with its own control panel – with imc STUDIO, you have full control over the entire measurement process.

### Configuration & measurement
**imc STUDIO Setup**
- Simple measurement device selection
- Clear configuration of all hardware settings
- Intelligent trigger machine
- Flexible, real-time calculations
- Structured project management

### Visualization & displays
**imc STUDIO Panel (Standard)**
- Versatile imc Curve Window configurations (2D/3D)
- Display live video
- Freely customize control & display elements per drag & drop
- Create reports
- Data browser for navigating through large volumes of data

### Testing sequences
**imc STUDIO Sequencer**
- Automation of test and evaluation procedures
- Configuration per Drag & Drop
- From sequence control to automated data evaluation and report creation
- imc FAMOS & MATLAB interface

### User interface
**imc STUDIO Panel (Professional)**
- Intelligent instruments (Widgets) and control elements
- Individually customizable GUIs
- Additional application-oriented components for user interfaces
- Full-screen display
- User rights management

### Test stand automation
**imc STUDIO Automation**
- Real-time automation platform
- Graphical design environment for test stands and test setups per Drag & Drop or notation
- imc hardware provides the necessary deterministic timing
- Threshold monitoring in the background

### Efficient system integration
- Integration of DLLs
- Scripting engine (.Net)
- Integrated workbench
- Connection to 3rd-party devices
- Implement your own data-stream analysis
- LabVIEW interface (VI's)
- DIAdem interface

---

- imc STUDIO Standard
- imc STUDIO Professional
- imc STUDIO Developer
## Live data analysis
**imc Online FAMOS / imc Inline FAMOS**
- Analyze and calculate live data streams
- “Immediate results” during the running measurement
- Autarkic in the device (imc Online FAMOS)
- PC-based with scalable performance (imc Inline FAMOS)
- Simple syntax

## Analysis & documentation
**imc FAMOS**
- Powerful data analysis and documentation
- Full range of pre-defined calculation functions
- Create multi-layer macros
- Create user-defined GUIs
- Control large amounts of data

## Video integration
**imc STUDIO Video**
- Time-synchronized video and measurement data acquisition
- Pre-trigger function
- Up to 4 simultaneous video cameras
- 2 redundant channels per camera with independent sampling and trigger settings (monitor channels)

## Webserver
**imc REMOTE**
- Configurable homepage for displaying and operating imc measurement devices
- Platform-independent device access with standard internet browser
- Web Design Wizard for creating individual web pages
- Supports https (SSL) for secure connection

## Sensor management
**imc SENSORS**
- Management of any sensor
- Measurement channel configuration from sensor database per Drag & Drop
- Descriptions from TEDS

## Remote Testing
**imc LINK / imc WEBDEVICES**
- Remote connection for imc measurement systems via WiFi or mobile radio
- Automatic measurement data transfer to the PC or server
- Automated evaluations
- GPS data on map background
- Turnkey solutions including IT and service

---

**imc STUDIO Plug-In**

**Additional software**

TEDS support
(Transducer Electronic Data Sheet)
imc C-SERIES supports direct read/write of TEDS sensors, including imc’s TEDS Clip.

Connectors: TEDS interfaces require the ACC/DSUB-TEDS-x variants of our connectors.
“IEPE” type TEDS is supported in audio modules with direct BNC input connectors.

Digital I/O
galvanically isolated, configurable to 24V/5V (TTL/CMOS)
Level, output: 0.7A sink, high current: sink and source 0.7A

Pulse counter
full analog input conditioning:
500 kHz analog bandwidth, differential input, analog filter, software adjustable threshold levels
Modes: event counter, time, frequency, speed, RPM, differential and absolute angle and displacement
